

## 2.10 Print Area DVD

The maximum outer print diameter is 117mm and the inside diameter 21mm. Ink printed inside this inner area will appear a lighter colour than the rest of the disc, as this section of the disc is clear, not silver.

The following diagram is at 100% DVD size and may be used as a template for sizing. Please note the keylines in the diagram are to be used as a guide only. All keylines must be deleted on finished separated filmwork and disc.

Where a white base or a specific colour is required as a base coat for the DVD, film must be supplied to ensure exact registration of label print.
